14.2 Follow-up for Payment	24
Summary and Key Takeaways	25

1. Vendor Creation Process

The Vendor Creation Process is the foundational workflow within the GMSS CRM system. It governs how new companies are onboarded, evaluated for interest, taken through agreement execution, and ultimately classified as Final Companies eligible to participate in tender operations.

1.1 Company Information Collection

When a new vendor record is initiated, the system captures the following core information:

- Name of Company
- **Railway Linkage:** Whether the company is linked with Indian Railways (Yes/No selection).
- **Manufacturing Product (TAG):** An input field for specifying the product(s) the vendor manufactures. This tag is used for automated tender matching later in the workflow.
- **Company Type Classification:** The system classifies the company as New Company, Interested Company, Final Company, or Deleted Company based on workflow progression.

1.2 New Company Onboarding

1.2.1 Collaboration Type Selection

For each new company, the team selects the nature of collaboration with GMSS:

- GMSS Vendor: The company will supply products directly through GMSS.
- Other Party (Consulting): The company operates as a consulting partner where GMSS earns commission on orders.

1.2.2 Initial Contact and Interest Assessment

Once a new company is registered, the system triggers the following outreach steps:

1. A push email is sent to the company sharing the GMSS introduction (template-based).
2. A follow-up is conducted to confirm the company's interest in working with GMSS.

1.2.3 Interest Outcomes

If Interested: The company is automatically marked as an "Interested Company" and proceeds to the agreement stage.

If Not Interested: The case is escalated to the Managing Director (MD) for approval. Three outcomes are possible:

- MD confirms the company is not interested, and remarks are recorded. The company is listed as a "Deleted Company."
- If, after MD discussion, the company becomes interested, it is automatically reclassified as an "Interested Company."

1.3 Interested Company: Agreement Process

1.3.1 Agreement Company Selection

The system prompts the user to select the entity with whom the agreement will be executed. Available entities include GMSS, Nisnik International, Nishhant Om Gupta, Pooja Gupta, Vandana Gupta, and Gupta Engineering.

1.3.2 Proposal and Agreement Process

A Proposal of Partnership (PoP) window opens with a pre-defined template for filling in details. A push email is then sent to the company sharing the proposal-cum-agreement document.

Proposal Outcomes:

- **Interested:** Proceed to follow-up for signed agreement.
- **Not Interested:** Escalate to MD for approval. If MD agrees the company is disinterested, it becomes a Deleted Company. If the company later shows interest, the PoP process restarts.

1.3.3 Follow-up for Signed Agreement

The signed agreement is pursued through two parallel channels:

- **Via Email:** Follow up for the email copy. If pending, set automated reminders. Once received, upload the document.
- **Via Courier (Hard Copy):** Follow up for hard copy dispatch. Track courier details and upload proof of delivery.

Once the agreement is uploaded and approved by the MD, the company is automatically marked as a "Final Company" after payment terms are filled.

1.3.4 Digital Signature Process

Companies may also be asked to provide a digital signature:

- **Agree to Provide:** Follow up via courier for the signature. Upload and save upon receipt. Expiry tracking and auto-renewal notices are managed by the system.
- **Not Agree:** Escalate to MD. If MD also does not agree, the company is listed as Deleted. If approved, the digital signature work is handled by the company.

1.3.5 Company Documents Upload

Supporting company documents are collected through follow-up. The system tracks pending documents, manages reminders, and monitors document expiry dates with auto-renewal notifications sent 30 days before expiry.

1.4 Payment Terms Configuration

1.4.1 GMSS Vendor Payment Terms

For direct vendors, the following payment options are available:

- Advance Payment
- Payment within 30 Days
- Payment After 30 Days

A notification is triggered when the payment stage is reached.

1.4.2 Other Party (Consulting) Payment Terms

For consulting partners, the system captures commission details:

- The decided commission is filled as a percentage or specific amount.
- Commission structure options: 50% on order and 50% on payment release, or 100% on payment release.
- Auto-generated invoices and notification emails are sent when the payment stage is reached.

If additional benefits are provided by the consulting party (monthly, quarterly, or yearly), the system calculates the amount including 18% GST and manages invoicing and follow-ups accordingly. After configuration, the company is marked as a "Final Company."

1.5 Final Company

A Final Company receives notifications when tenders matching their product tags are shared. They are eligible to participate in the full tender workflow.

1.6 Deleted Company

Companies classified as "Deleted" are removed from active workflows but retained in the system for audit and historical reference purposes.

2. Tags (Product Management)

Tags represent product categories used to match vendors with relevant tenders. When a tender title is tagged, it is auto-saved under the respective product tag.

2.1 Auto Mail Restriction

For each tagged tender title, administrators can set auto-mail restrictions. Specific companies can be excluded from receiving automated tender notification emails by selecting their name in the restriction list.

3. Tender Intimation

This module manages the discovery, shortlisting, and preparation of tenders from government portals before they enter the active tender workflow.

3.1 Tender List Management

3.1.1 Source of Tenders

Team members source tender lists from IREPS and GEM government portals. These lists are uploaded into the CRM system for centralized tracking.

3.1.2 Shortlisting

Only tenders shortlisted by the Managing Directors proceed to further processing. The system supports filtering by employee to identify already-mailed tenders, and approved tenders move to the NIT upload stage.

3.1.3 NIT Document Upload

The Notice Inviting Tender (NIT) document is uploaded for each shortlisted tender. MDs review and further filter the tenders after the NIT upload. Selected NITs then proceed to the tagging stage.

3.2 Tagging

MDs create product tag names. Tender titles are auto-saved under their respective tags, linking them to the relevant vendors in the system.

3.3 Document Upload Stage

Selected tenders proceed to the document upload stage, where users can attach multiple documents using an "Add (+)" option to insert rows, or upload documents with links and details.

4. Pre-Tender Follow-up

After tenders are tagged, the system initiates automated outreach and follow-up processes to engage both existing and new vendors.

4.1 Automated Email Distribution

Upon tagging, the system sends automated emails based on company classification:

- **Final and Interested Companies:** Receive tender notification emails using GMSS Vendor or Other Party (Consulting) templates.
- **New Companies:** Receive both the tender notification email and a GMSS introduction email.

4.2 Follow-up by Team Members

4.2.1 New and Interested Companies

Team members follow up to gauge interest:

- **Interested:** Company moves to Agreement Company Selection in Vendor Management. After becoming a Final Company, shared tenders are saved and worked on.
- **Not Interested:** Remarks are added and the case moves to MD approval. If the MD determines the company is not interested, it is saved as Deleted. If interested, it proceeds to Agreement Company Selection.

4.2.2 Final Companies

Final Companies proceed directly to the Tender Type and Participation Process.

4.3 Tender Department and Officer Details

For each tender, the following contact information is captured:

- Department Name with contact numbers and email IDs
- Officer Name with contact numbers and email IDs
- Support for multiple departments and officers via "+ Add" option

If selected details are incorrect, corrected details are shared for MD approval. An authorized person is assigned to update contact information with proof of update required.

4.4 Tender Participation Approval (A.G.)

The system checks if Approval from the Accountant General is required:

- **Approval Required:** Move to the Vendor Approval Section.
- **No Approval Required:** Proceed to product feasibility check.

4.4.1 Feasibility Check

- **Not Feasible:** Remarks are shared, MD approval is sought. The tender may be stopped and the company added to the auto-mail restriction list, or the MD may override and declare it feasible.
- **Feasible:** Proceed to follow-up for quotation requests and company supporting documents.

4.4.2 Tender Type Verification

The system performs multiple checks before tender participation:

3. Mail Check: Verify if the tender has already been mailed. Upload proof images accordingly.
 4. Closing Date Check on IREPS: Verify if dates have changed, upload proof, and update NIT documents if needed.
 5. Tender Description Validation: If the description is valid, proceed. If not, escalate to MD for suggestions. Letters may be required from the company or GMSS, with follow-up tracking for officer approvals.
 6. Normal vs. Limited Tender: Normal tenders proceed directly. Limited tenders are checked for loaded/unloaded status. Unloaded tenders require a participation request via push mail with follow-up.
-

5. Tender Preparation and Participation

5.1 GMSS Vendor Process

5.1.1 Last Purchase Rate (LPR)

The system displays previous history for the same tender title along with historical tabulation data. A calculation window computes the LPR using the formula:

Amount - GST = Outcome - Margin (%) = Final Value

Team members can push-mail the LPR to vendors via a template-based email.

5.1.2 Quotation and Document Upload

Follow-up is conducted for quotation and supporting documents from the vendor. Pending items trigger automated reminder emails. Received documents are uploaded using the "Add (+)" option and are auto-saved in the related vendor profile.

5.1.3 EMD (Earnest Money Deposit) Process

The system verifies if EMD is required. If yes, payment details are shared through online (upload receipt, push mail to consignee and buyer) or offline (courier with tracking) channels. If no EMD is needed, the process moves directly to the MD quotation review.

5.1.4 MD Quotation Review

MDs review and compare all received quotations. Unselected quotes receive remarks and the tender is stopped for those vendors. Selected quotes proceed to the tender participation stage.

5.1.5 Tender Participation

The system displays all uploaded company documents and the selected quotation. The GMSS margin is added to the quote, and the basic quote price plus GST is calculated to determine the final quote price. An intimation is generated for portal participation. After participation, proof is uploaded and MDs are notified. If participation fails, reasons are documented and MD approval is sought.

5.2 Other Party (Consulting) Company Process

5.2.1 Last Purchase Rate (LPR)

Similar to the GMSS Vendor process, previous tender history is displayed, LPR is calculated, and push-mail is sent to the consulting company.

5.2.2 EMD Submission

The system checks MSME classification. Micro/Small enterprises upload their certificate for portal submission. Medium/Large enterprises proceed to share payment details (online upload with receipt and push mail to buyer). The process then moves to quotation and document upload.

5.2.3 Quotation and Document Upload

Documents received from the consulting company are uploaded and auto-saved. If the company does not provide documents, the process still moves forward to tender participation.

5.2.4 Tender Participation

The consulting company is guided to upload their quotation on the portal. A follow-up is maintained for confirmation of portal submission with automated reminders.

6. Order Follow-up

6.1 Tender Result Monitoring

The system tracks tender results with automated reminders. When results are published, a notification is shown for EMD returns, and the post-tabulation section is activated.

6.1.1 Post Tabulation

- **GMSS Vendor:** Employees share financial and technical tabulations, which are uploaded and saved as history for future reference.
- **Other Party (Consulting):** Tabulations are requested from the consulting party, uploaded, and stored in the tender history.

MDs review tabulations. Unselected tabulations receive remarks and the tender is stopped. Selected tabulations proceed to the Department and Officer contact stage.

6.2 Follow-up for Purchase Order (PO)

Department and officer details are captured for PO follow-up. Automated reminders are set until the PO is received.

6.2.1 PO/LOA Not Received (Lost)

If the PO or LOA is lost, the reason is documented and escalated to MD. A complaint letter may be raised, uploaded, and sent via push mail or courier to the relevant officers. The decision outcome (rejected or accepted) determines whether the tender process continues or stops.

6.2.2 PO/LOA Received

Upon receipt, the PO or LOA is printed, uploaded, and MDs are notified. An EMD Return Request Letter is generated using a template, downloaded as PDF, and shared with the relevant department via online upload or offline courier. The process then moves to EMD return tracking.

7. EMD (Earnest Money Deposit) Return

7.1 EMD Received

When the EMD return is received, the details and letter are uploaded. MDs are notified and the EMD letter is automatically shared with the accounts department. Payment receipt confirmation is tracked with follow-up reminders.

7.2 EMD Not Received

Department and officer details are captured. Automated follow-up with templated emails is initiated to the relevant officer. Once received, the same receipt and accounts notification process applies.

8. LOA (Letter of Acceptance) Process

This module handles the detailed processing of a received LOA, including multiple cross-checks against the original quotation.

8.1 LOA Recording

The LOA is uploaded and its details are entered into an Excel tracking sheet. The Excel entry number and a PDF/image of the entry are uploaded for reference. Key details captured include Railway Department name, Company name, LOA number, and LOA date.

8.2 CCA (Vendor Approval) Check

If a Competent Contracting Authority approval is required, the process routes to the Vendor Approval workflow. If not applicable, it proceeds to the next check.

8.3 Cross-Check Stages

The LOA undergoes a series of verification checks:

8.3.1 Delivery as per Quote

If the delivery schedule matches the original quote, the process proceeds. If not, MD approval is sought for a push mail to the company regarding the schedule change. Pending responses trigger automated reminders.

8.3.2 Security Deposit Check

If a security deposit is required:

- **GMSS Vendor:** The security deposit is uploaded along with Bank Guarantee/FDR details (number, date, validity, amount). Courier dispatch is tracked for physical delivery.
- **Other Party (Consulting):** The company is guided on the submission procedure. The same Bank Guarantee/FDR details are captured and courier tracking is managed.

8.3.3 Price as per Quote

If the price matches the quote, the process continues. If not, MD approval triggers a push mail to the company requesting a counter price and revised quotation. Acceptance proof is uploaded, or the tender may be stopped with remarks.

8.3.4 Packaging as per Quote

If packaging charges are applicable and differ from the quote, MD approval is sought for price negotiation via push mail. Acceptance or rejection follows the standard approval flow.

8.3.5 Statutory Variable Clause (SVC) and +/- 5% Clause

Both clauses are checked for applicability. If not mentioned in the LOA, the process routes to the Modification Advice Letter generation.

8.4 Modification Advice Letters

The system auto-selects which sections require modification (SVC clause, +/- 5% clause, delivery schedule). A Modification Letter is generated using a template, shared via push mail or courier with tracked delivery, and sent to the relevant department officers.

8.5 Get Purchase Order

After all LOA checks and modifications are complete, department and officer details are captured for PO follow-up. Automated reminders are set. Once the PO is received, it is printed, uploaded, MDs are notified, and the process moves to Order Processing.

9. Order Processing (Purchase Order Handling)

This is the most comprehensive module, covering all aspects of PO recording, delivery management, inspection, and vendor-specific workflows.

9.1 PO Uploading and Recording

The PO is uploaded and details are entered into the Excel tracking sheet. The following information is captured:

Category	Fields Captured
Company & PO Details	Railway Department, Company Name (select), PO Number, PO Date
Pricing & GST	PO Basic Rate, GST Details
Purchaser Information	Purchaser Name, Designation, Contact, Email
Tender & Supplier	Tender Number Reference, Supplier Payment Status, Supplier Details, Supplier Basic/Packing Rate
PL, Item & Quantity	PL Number, Item Description, Brand, Total/Delivered/Balance Quantities
Option Clause	Applicable/Not Applicable, Department/Officer details, Final Delivery Date
Inspection	Required (Yes/No), Inspection Agency Name
Consignee Info	Person Name, Designation, Contact, Email, Accounts Officer details

9.1.1 Option Clause Management

When the option clause is applicable, a reminder is set 10 days before the final delivery date to call the PO officer regarding an additional 30% quantity. If quantity is added, the officer connects with MDs for confirmation, and a Modification Advice is tracked with automated follow-ups.

9.2 GMSS Vendor Order Processing

9.2.1 Delivery Deadline and PO Release

Delivery can be configured as one-time, partial (multiple dates), or option clause delivery. Each delivery date triggers a reminder for PO release and delivery deadline (up to 60 due days).

When GMSS releases the PO to the vendor, Firm Bill details are captured in a pop-up window and auto-mailed. Details include Firm Bill Number, Date, Quantity, Rate, Basic Rate Difference, Total Charges, Total Profit, and Margin percentage.

9.2.2 Delivery Confirmation and Extension

Pending delivery confirmations are tracked with automated reminders. Upon confirmation, the date and proof are uploaded, and the process moves to Inspection (if applicable) or Dispatch.

If a delivery extension is required, a request is prepared and shared with the relevant department. The officer's decision is tracked:

- **Extension Approved:** A Modification of Advice or Extension Letter is issued. Late Delivery Charges (LDC) applicability is assessed and attributed to GMSS or the GMSS-Vendor.
- **Rejected:** Reason is documented. The tender process may close pending MD approval, or further discussion with the officer may lead to approval.

9.3 Other Party (Consulting) Order Processing

9.3.1 Delivery Durations

Same delivery configuration options as GMSS Vendors (one-time, partial, option clause), with reminders tied to commission invoice and delivery deadlines.

9.3.2 Commission Payment Check

If a commission on PO is agreed upon, notification and commission invoice are generated based on the vendor management commission structure. Follow-up for payment is managed with automated reminders. Received payments are sent to accounts. If no commission is required, the process moves directly to Security Deposit handling.

9.3.3 Delivery Confirmation and Extension

Identical to the GMSS Vendor process, with LDC faults attributed to either GMSS or the Other Party (Consulting) Company.

10. Inspection

When inspection is required, this module manages the entire inspection lifecycle.

10.1 Inspection Setup

The Inspection Agency Name is auto-filled from the PO details. The inspection place is called from the Railway Portal with follow-up tracking.

10.2 Inspection Scheduling

Once the inspection is arranged, officer details (name, contact, email) and the schedule of visit are shared. Follow-ups track whether the visit occurs. If the officer does not visit, reasons are recorded and the visit is rescheduled.

10.3 Inspection Status

- **Approved:** The inspection certificate and details are uploaded, and the process moves to Dispatch and Delivery.
 - **Rejected:** The reason is discussed with MDs and the company. Issues are resolved and a new inspection is requested from the Railway Portal.
-

11. Dispatch and Delivery

11.1 Purchase Invoice and Payments (GMSS Vendor Only)

For GMSS Vendors, purchase invoice receipt is tracked with automated reminders. Upon receipt, payment is released with details uploaded and auto-mailed to the company.

11.2 GMSS Documents

The following documents are prepared and uploaded by GMSS before dispatch:

- Supplier Billing/Costing with Sales Invoice (Bill Number, Date, Quantity, Basic Price, Packing Charges, Total Cost)
- E-way Bill, E-Dispatch, Warranty Certificate, Batch Test Reports
- Third-Party Inspection Report, Material Test Report, Packing Details, Work Test Certificate
- Additional documents via the "+" option

All uploaded documents are push-mailed to relevant stakeholders.

11.3 Dispatch Order and Courier Tracking

Dispatch is followed up with automated reminders. Courier details captured include: Dispatch Receipt, Courier Name/Contact/Email, AWB/POD/GNR/Consignment/Lorry Number, Sending Date, Courier Website (auto-hyperlinked), and Driver Name/Contact.

11.4 Delivery Confirmation

Proof of delivery is followed up with the consignee. Upon delivery, the date and courier receipt are uploaded.

11.5 Late Delivery Charges (LDC)

LDC applicability is auto-selected. When applicable, the system calculates: Given % multiplied by Railway PO value to determine the LDC amount, then total weeks of delay multiplied by the LDC amount to determine total cost. An LDC invoice is generated and auto-mailed to the company with follow-up for payment.

11.6 R/Note (Receipt Note) Status

The R/Note is tracked from the consignee with automated reminders. Upon receipt, the R/Note Number, Date, and uploaded document are recorded.

12. Warranty Rejections

This module handles product warranty claims and rejection processing within the warranty period.

12.1 Rejection Recording

The warranty rejection advice is uploaded with details including the reason for rejection. Related details captured include Tender Number, PO Number and Date, Invoice Number and Date, Supplier Company Details (Name, Contact Person, Designation, Numbers, Emails), and Consignee Railway Details.

12.2 Warranty Period Verification

The system checks the warranty start and end dates. If the warranty period is over, no action is required. If the rejection falls within the warranty period, an intimation is generated requiring action within one week.

12.3 Resolution Process

Follow-up is initiated with the supplier company to either align an engineer visit or directly dispatch a substitute product.

12.3.1 Dispatch Replacement

Courier details are tracked end-to-end: dispatch receipt, courier information, AWB/tracking numbers, delivery confirmation, and R/Note status. Each stage has automated reminders.

12.3.2 Engineer Alignment

Engineer details (Name, Contact, Email), visit date/time, and Joint Report are tracked and uploaded.

12.4 Rejection Closure

Once resolved, the outcome is documented:

- Product Replaced or Product Rectified
- Consignee Letters: Rejection Withdrawal Letter (RWL) and Recovery Refund Letter (RRL) are tracked with automated reminders.
- **Solution Timeline:** If resolved within 60 days, standard closure applies. If above 60 days, a Supplementary Invoice is generated from the IREPS portal and push-mailed to the consignee with payment follow-up.

13. Bill Submission and Payments

13.1 GMSS Vendor Billing

13.1.1 Invoice Upload

Bills and related documents are uploaded with details. Portal submission of bills is tracked with reminders and proof of submission uploaded.

13.1.2 GMSS Payments

An intimation is generated for Security Deposit release and payment action required within one week. The consignee accounts officer details are auto-filled. Payment follow-up tracks three outcomes:

- **Full Payment Received:** Discussed with MDs, remarks recorded, and details sent to accounts.
- **Deducted Payment:** Reason is analyzed. If the fault lies with the GMSS Vendor, a Debit Note is generated via a pop-up window and push-mailed. If the fault lies with GMSS, it is classified as Loss, Rebate, Discount, or Other Charges (with back-dated entries). MD approval is required before sending to accounts.

13.2 Other Party (Consulting) Billing

13.2.1 Invoice and Portal Submission

Bills and documents are uploaded. The consulting company is guided to upload bill documents on the portal, with automated follow-up reminders.

13.2.2 Company Payments

Consignee account officer details are auto-filled. Payment status from the consignee to the company is tracked.

13.2.3 GMSS Commission Payment

A commission invoice is generated based on the agreed commission structure. Payment follow-up tracks:

- **Full Payment:** Discussed with MDs and sent to accounts.
- **Partial Payment:** Reason is documented, remaining payment is followed up with automated reminders.
- **Deducted Payment:** Issues are resolved through follow-up. Unrecoverable amounts are classified (Loss, Rebate, Discount, Other Charges) and processed with MD approval.

Companies consistently not paying may be marked as Black Listed.

14. Security Deposit Return

This module manages the recovery of security deposits after order completion.

14.1 SD Department Details

The SD Officer details (Name, Contact, Email) are auto-filled from the system.

14.2 Follow-up for Payment

Automated reminders with templated emails are sent to the officer for SD payment release. Upon receipt, the details are discussed with MDs (with remarks if any) and sent to the accounts department.

Summary and Key Takeaways

The GMSS Architect Workflow defines a comprehensive, end-to-end CRM system for managing the entire lifecycle of vendor relationships and railway tender operations. The following are the key takeaways from this process documentation:

Aspect	Key Takeaway
Vendor Lifecycle	Companies progress through a structured pipeline: New → Interested → Final, with MD oversight at each escalation point.
Dual Vendor Model	The system supports two distinct vendor types (GMSS Vendors and Consulting Parties) with separate payment structures and workflows.
Automation	Automated email notifications, reminder systems, and invoice generation reduce manual intervention throughout the process.
Approval Hierarchy	MD approval is required for critical decisions including company deletion, tender stops, delivery extensions, and payment discrepancies.
Document Management	Every stage includes document upload requirements with expiry tracking and renewal notifications.
Audit Trail	All decisions, remarks, and communications are recorded, creating a comprehensive audit trail.
Tender-to-Payment	The workflow covers the full cycle from tender discovery through dispatch, inspection, billing, warranty, and security deposit return.
Template-Driven	Communications use pre-defined templates for consistency across emails, proposals, agreements, and legal letters.
Financial Controls	Commission structures, LDC calculations, EMD tracking, and deduction management ensure complete financial accountability.
Escalation Paths	Clear escalation paths exist for every decision point, ensuring no tender or vendor action is left unresolved.
